

Snyk GUI Setup & Java Project Scanning - Complete Step-by-Step Process

Step 1 - Create Snyk Account

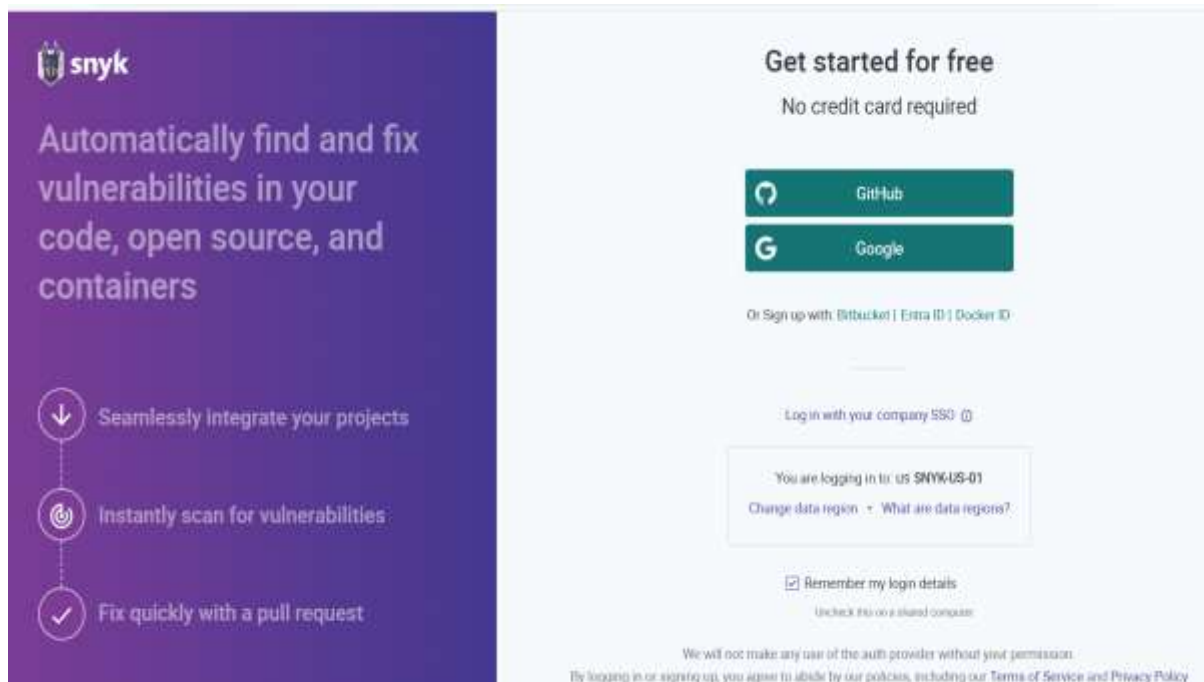

Open: <https://snyk.io>

Click: Sign Up

Login using:

- GitHub
- Google
- GitLab
- Email

After login, Snyk dashboard opens.

Step 2 - Open Snyk Dashboard

Dashboard URL:

<https://app.snyk.io>

You will see:

Projects
Targets
Reports
Settings

Step 3 - Add Project Repository

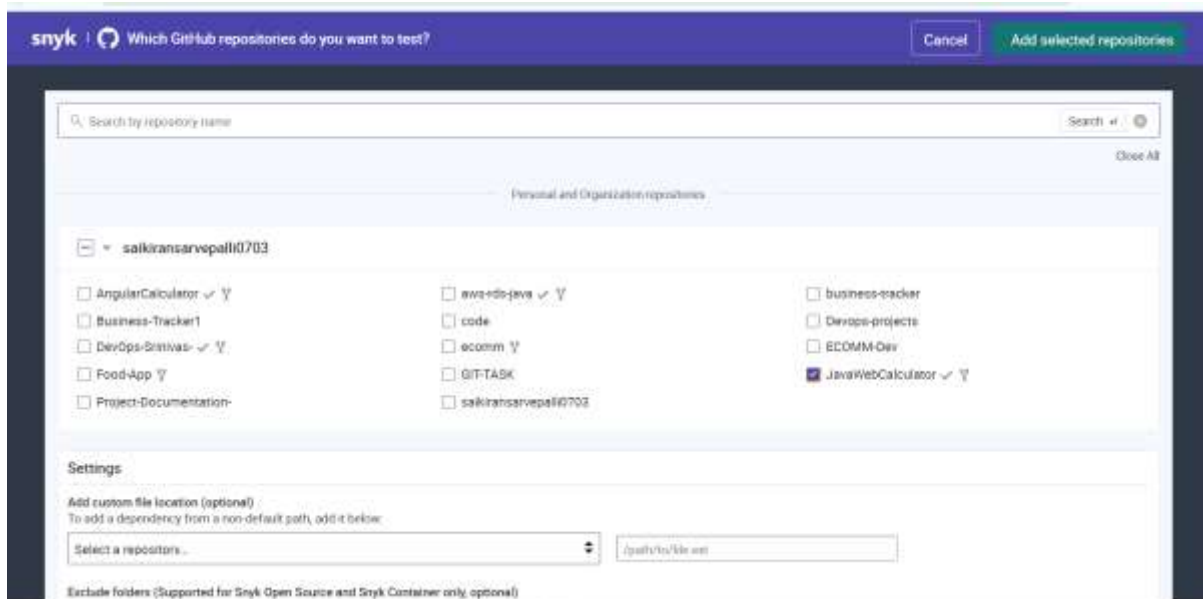

In dashboard:

Projects → Add Projects

Select source control:

- GitHub
- GitLab
- Bitbucket

Authorize Snyk access.

Step 4 - Select Java Repository

Choose your Java repository.

Example:

JavaWebCalculator

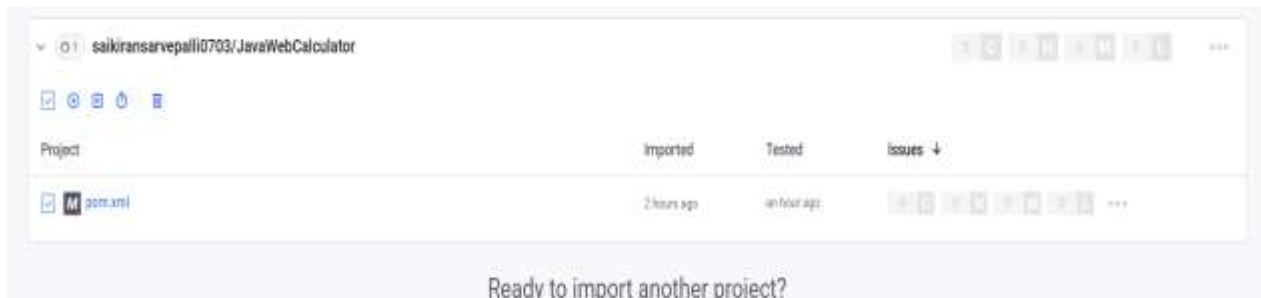

Click:

Add Selected Repositories

Snyk automatically:

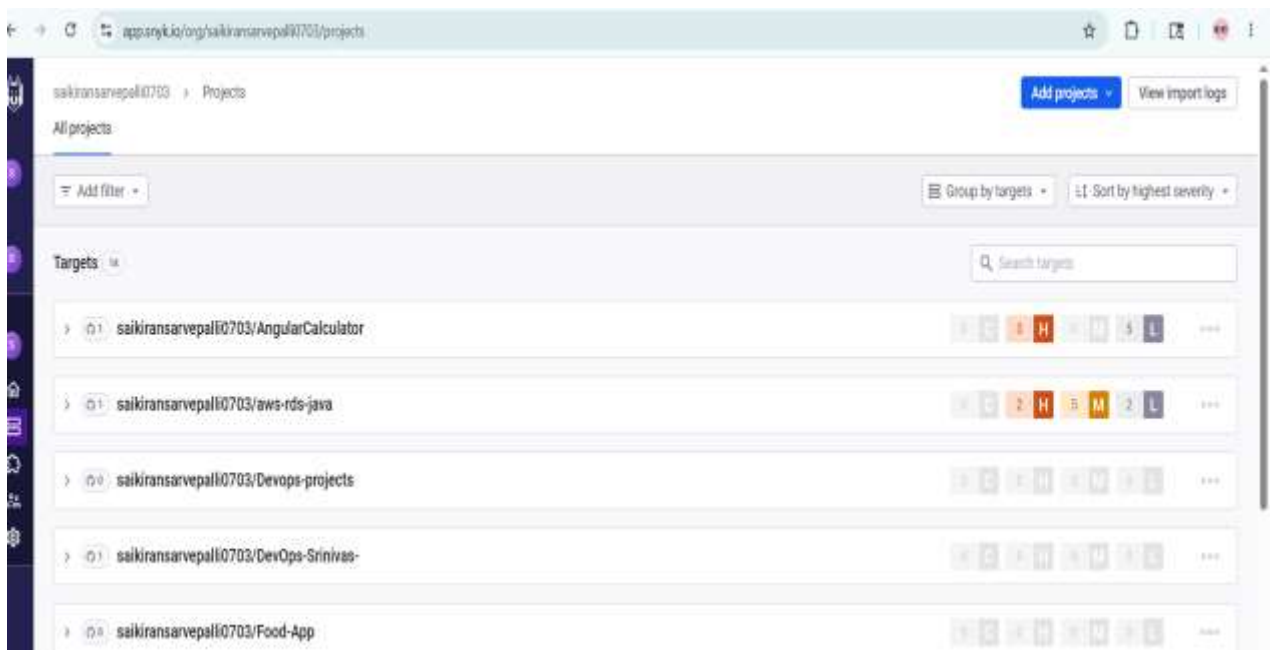

- Imports repository
- Detects pom.xml
- Starts dependency scan

Snyk will automatically:

- Import the repository
- Detect the pom.xml file
- Start dependency vulnerability scanning

Step 5 - View Vulnerabilities in GUI

Dashboard displays:

- Critical issues
- High issues
- Medium issues
- Low issues

You can view:

- CVSS score
- Package path
- Dependency tree
- Fix versions

Benefits of Using Snyk

- Detects security vulnerabilities automatically
- Integrates with GitHub, GitLab, and Bitbucket
- Supports Java, Node.js, Python, Docker, Kubernetes, and more
- Provides remediation suggestions
- Easy-to-use GUI dashboard

Conclusion

Snyk helps developers identify and fix vulnerabilities in Java applications quickly using an easy graphical interface. By integrating repositories and scanning dependencies, teams can improve application security during the development lifecycle.
